Application/Control Number: 09/838,344 Page 2

Art Unit: 2862

1. This communication is in response to applicant's amendment received on

January 27, 2004.

2. The abstract of the disclosure is objected to because the abstract does not

set forth the nature and gist of the invention.

Correction is required. See MPEP § 608.01(b).

3. The disclosure is objected to because of the following informalities: There

is no brief description of figures 6A, 6B and 7, it is not clearly defined as to what

is the purpose of having alignment marks on the substrate.

Appropriate correction is required.

4. The drawings are objected to because (1) there are texts on page 1; (2)

Figure 4 is not clear, cannot see all elements.

A proposed drawing correction or corrected drawings are required in reply

to the Office action to avoid abandonment of the application. The objection to the

drawings will not be held in abeyance.

Application/Control Number: 09/838,344 Page 3

Art Unit: 2862

5. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 140 in fig. 3 (page 5, line 21). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

6. Claims 1-16,18-21 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, at line 4, "produce" should be ---produces---; it is vague as to what is a "scattering element" and how it scatters the fringe beam *based on*particles; how a diffractive element produces a fringe; where such elements are located;

In claim 4, it is unclear as to what the detector is indicating;

In claim 5, "elements in registration with one another" is not clear;

In claim 7, the phrase "substrate is less than a 1000 microns *on each* side" is not clearly understood;

Application/Control Number: 09/838,344

Art Unit: 2862

In claim 9, it is unclear as to how all elements e.g. first surface in contact with particles; a diffractive element; interference fringes; a second diffractive elements are on one side of the substrate; how received light is monitored;

In claim 13, what positive structures are;

In claim 14, how a laser diode emits light from a top of the housing since there is a substrate between the top of the housing and the laser;

In claim 15, "laser beam" should be ---laser--- at line 4;

In claim 19, it is unclear whether particles are illuminated by a photodiode or a laser; how interference is detected; how particle flow is detected; the scope of the claim is not clear from the language of the claim;

In claims 20-21, it is vague as to how shear stress or particle size is determined; what type of information is used to determine either size or shear stress of particles.

The claims not specifically addressed share the indefiniteness as they depend from rejected base claims.

7. Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: e.g. a laser, transparent substrate, diffractive elements, photodiode for collecting light, etc.

Application/Control Number: 09/838,344

Art Unit: 2862

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 3,4,9,14,15,19-21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 45,47 of U.S. Patent No. 6,717,172. Although the conflicting claims are not identical, they are not patentably distinct from each other because the subject matter of above indicated claims is inherently claimed in claims 45 and 47. Claims 3-4,9,14-15,19-21 encompass the boundaries of the claims 45 and 47.

9. Applicant's arguments with respect to rejected claims have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 09/838,344

Art Unit: 2862

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note PTO-892.
